

Capable Wealth

Master Brand Standards (v3 — Full, with Logos)

This document defines the official visual identity standards for Capable Wealth, including logo usage, color system, and typography. These standards apply across the website (Squarespace 7.1), PDFs/lead magnets, presentations, and marketing materials.

Tagline: Precision planning for life beyond the OR.

1. Color System — Capable Blue Evolution

The Capable Wealth palette is designed to convey trust, professionalism, and warmth. Antique Gold is reserved for emphasis and calls-to-action (target ≤ 10–12% usage per page).

Role	Color Name	Hex Code	Usage
Primary	Deep Muted Blue	#243A4B	Hero backgrounds, headers, dark emphasis sections
Secondary	Blue Slate	#5F7483	Supporting backgrounds, cards, subtle contrast blocks
Accent	Antique Gold	#B08D57	Buttons, links, icons, highlights (sparingly)
Neutral Light	Off-White	#F6F7F5	Default content backgrounds
Neutral Dark	Charcoal	#1E2428	Primary body text on light backgrounds
Neutral Mid	Warm Gray	#9AA3A8	Secondary text, strokes/dividers, captions/metadata

60–30–10 guideline: 60% Primary Blue, 30% Secondary/Neutrals, 10% Accent Gold.

2. Typography System — REM + PX

Typography balances authority and clarity using a Serif + Sans pairing. Use REM values for Squarespace and PX values for fixed-layout tools (PDFs, Canva, InDesign, ads). Reference assumes 1rem = 16px.

Element	Font	Weight	REM	PX	Notes
H1 (Hero)	Playfair Display	600	3.25–4.0rem	52–64px	Primary page headlines
H2	Playfair Display	500	2.25–2.75rem	36–44px	Section headers
H3	Playfair Display	400	1.6–1.9rem	26–30px	Subsections
Body	Inter	400	1.0625–1.125rem	17–18px	Primary reading text
Lead Paragraph	Inter	500	1.125–1.25rem	18–20px	Intro emphasis
Navigation	Inter	500	0.875–0.9375rem	14–15px	Navigation
Buttons	Inter	600	0.9375–1.0rem	15–16px	CTAs
Captions / Legal	Inter	400	0.75–0.8125rem	12–13px	Disclaimers & metadata

Typography guardrails: Do not use all-caps headings, condensed fonts, or decorative styles. Maintain relaxed line height for long-form financial content. Allow Squarespace to handle responsive scaling.

3. Squarespace Implementation Notes (Practical)

Squarespace uses a 5-slot base palette plus section color themes. Implement the five core colors in the Palette, then enforce brand behavior through section themes.

Squarespace palette (5 slots): #243A4B, #5F7483, #B08D57, #F6F7F5, #1E2428

Theme mapping: Lightest One = default content; Dark Two = hero/emphasis

Secondary text mapping: Paragraph Small = #9AA3A8 (Warm Gray)

4. Logo Usage & Rules

Use only the approved logo files. Do not recreate or export logos from screenshots. Always choose the version that maximizes contrast and legibility.

4.1 Primary Logo (Light Background)

Use this as the default logo on light/off-white backgrounds.

4.2 Logo for Dark Backgrounds

Use this version on dark sections (e.g., brand-blue hero areas) and dark marketing materials.

4.3 Icon-Only Mark

Use only when space is constrained (favicon, social avatar, small UI).

4.4 Clear Space & Minimum Size

Clear space: Maintain clear space equal to the height of the 'C' in the Capable logotype on all sides.

Minimum size: Digital 160px wide (primary); Print 1.5 inches wide; Icon-only 32px minimum.

4.5 Incorrect Usage (Do Not)

- Do not recolor outside approved versions
- Do not stretch, skew, or distort
- Do not apply drop shadows, outlines, or effects
- Do not place on busy or low-contrast backgrounds
- Do not alter spacing, alignment, or typography

5. Imagery & Photography Standards

This section defines the official imagery and photography standards for Capable Wealth. These guidelines are audience-specific and must be followed across the website, PDFs, presentations, and all marketing materials.

5.1 Audience Context

All imagery must resonate with orthopedic surgeons, typically ages 45–65, who own or co-own private practices and are approaching a period of transition, succession, or exit. Imagery should reinforce confidence, composure, and long-term thinking — not urgency, hype, or aspiration.

5.2 Approved Imagery — People (≈50%)

People imagery should be professional-heavy, reflecting seniority, credibility, and experience. Demographics should primarily reflect current orthopedic surgeon realities: mostly male-presenting professionals, with meaningful inclusion of women. Age representation should skew mid-career to late-career.

Approved characteristics:

- Professional or medical-adjacent environments (office, consult room, medical building)
- Natural or soft professional lighting
- Editorial or lightly posed style
- Calm, neutral expressions
- Neutral, professional wardrobe (scrubs only if understated)

Secondary (supporting only):

Reflective or lifestyle moments may be used sparingly to suggest transition and optionality — walking, quiet reflection, or non-leisure environments. These should never dominate a page.

5.3 Approved Imagery — Environments (≈50%)

Environment imagery should reinforce stability, longevity, and perspective. These images often replace people imagery where clarity and calm are prioritized.

Approved examples:

- Medical office interiors (clean, modern, professional)
- Architectural exteriors (medical or institutional buildings)
- Neutral professional interiors with natural light
- Landscapes suggesting openness and transition (mountains, coastlines, open horizons)

Color treatment must remain muted and neutral. Imagery should never overpower typography or brand colors.

5.4 Disallowed Imagery (Strict)

The following imagery is not permitted under any circumstances, as it undermines trust with high-net-worth, late-career orthopedic surgeons:

- Generic finance or corporate stock photography (handshakes, smiling teams, charts on screens)
- Young, startup-style professionals
- Cartoon or illustrated figures
- Overly dramatic or cinematic lighting
- Flashy luxury or lifestyle flex imagery (cars, yachts, watches)
- Extreme sports or adrenaline-focused visuals
- Abstract imagery with no grounding or relevance

5.5 Website-Specific Usage Rules

- Hero sections: Prefer solid brand color or subdued imagery only.
- Content sections: Imagery is optional; white space and typography take priority.
- Testimonials and credibility sections: Use real imagery only if authentic; otherwise omit imagery entirely.

5.6 Final Consistency Rule

If removing an image improves clarity or calm, the image should not be used. White space is always acceptable.

This section is intended to be inserted into the Capable Wealth Master Brand Standards document without modification. Deviations require explicit approval.

6. Layout & Spacing Standards

This section defines how content is structured, spaced, and paced across all Capable Wealth materials. Proper layout and spacing are central to conveying calm authority, clarity, and professionalism.

6.1 Core Principles

- White space is a feature, not a gap.
- Content should breathe; avoid dense or crowded layouts.
- Fewer elements with more space outperform complex compositions.
- Layout should reduce cognitive load, especially for complex financial topics.

6.2 Section Spacing — Website

Website sections should use generous vertical padding to create rhythm and separation without reliance on dividers.

Recommended baseline:

- Top padding: 6–8rem (96–128px)
- Bottom padding: 6–8rem (96–128px)
- Narrow sections (CTAs): minimum 4–5rem (64–80px)

Spacing may scale responsively on smaller screens, but relative proportions should remain intact.

6.3 Dividers

Dividers should be used sparingly and only when content transitions abruptly in purpose (e.g., education to call-to-action). Dividers are not required between standard content sections.

Divider guidelines:

- Color: Warm Gray (#9AA3A8)
- Thickness: 1px
- Full-width or content-width only
- Surrounded by generous vertical space

6.4 Content Width & Columns

Limit line length to improve readability. Avoid full-width text blocks for long-form content.

Guidelines:

- Primary content width: 640–760px
- Multi-column layouts: use only for supporting content or comparisons
- Avoid more than two columns for text-heavy sections

6.5 Cards & Grouped Content

Use cards to group related ideas, not to decorate content. Cards should feel structural and restrained.

Card rules:

- Use light backgrounds only
- Maintain consistent internal padding
- Avoid heavy borders or shadows
- Limit card usage per page to prevent visual clutter

6.6 Density & Restraint

When in doubt, remove elements rather than add them. Simpler layouts build trust and improve comprehension.

If a page feels busy, increase spacing before adding dividers, graphics, or color.

This section is intended to be inserted into the Capable Wealth Master Brand Standards document without modification. Deviations require explicit approval.

7. UI Components

This section defines the approved user-interface components used across Capable Wealth digital properties. Components should reinforce clarity, hierarchy, and restraint. Utility comes before decoration.

7.1 Buttons

Buttons are reserved for primary actions only. Overuse reduces clarity and perceived value.

Primary button:

- Background: Antique Gold (#B08D57)
- Text: White or Off-White
- Font: Inter, 600 weight
- Border radius: subtle (not pill-shaped)
- Use: Primary calls-to-action only

Secondary button:

- Background: Transparent
- Border: 1px Warm Gray (#9AA3A8) or Charcoal
- Text: Charcoal or Deep Blue
- Use: Secondary or supporting actions

7.2 Links

Links should feel integrated into the reading experience, not promotional.

Text links:

- Color: Antique Gold (#B08D57)
- Decoration: No underline by default; underline on hover only
- Use sparingly within body text

7.3 Cards

Cards group related information. They should remain light, structural, and unobtrusive.

- Background: Light neutral only
- Borders: Optional, subtle, Warm Gray
- Shadows: Avoid or keep extremely subtle
- Internal padding: Consistent across cards

7.4 Forms

Forms should feel calm and minimal to reduce friction.

- Single-column layouts preferred
- Clearly labeled fields (no placeholder-only labels)

- Avoid unnecessary fields
- Primary action uses Gold button

7.5 Navigation

Navigation should emphasize clarity and confidence.

- Font: Inter, medium weight
- Avoid excessive menu items
- Use dropdowns sparingly
- Current page state should be clear but subtle

7.6 States & Feedback

UI feedback should be subtle and professional.

- Hover states: Slight color shift or underline
- Focus states: Visible but restrained
- Error states: Clear messaging without alarmist color usage

This section is intended to be inserted into the Capable Wealth Master Brand Standards document without modification. Deviations require explicit approval.

8. Voice & Tone Standards

This section defines how Capable Wealth communicates across all written and spoken channels. Voice and tone should reinforce trust, competence, and composure when speaking to late-career orthopedic surgeons navigating complexity and transition.

8.1 Brand Voice (Always)

The Capable Wealth voice is steady, informed, and precise. It reflects deep expertise without ego, and confidence without urgency.

Voice attributes:

- Calm and composed
- Clear and structured
- Direct, not verbose
- Professional, not academic
- Authoritative without being promotional

8.2 Tone by Context

Educational: Neutral, explanatory, clarity-first.

Advisory: Confident, reassuring, acknowledges complexity.

Calls-to-action: Calm, invitational, conversation-focused.

8.3 Language to Use

- Strategic, deliberate, coordinated
- Complexity, trade-offs, options
- Alignment, structure, planning
- Conversation, process, decision-making

8.4 Language to Avoid

- Guaranteed, no-brainer, can't miss
- Secrets, hacks, shortcuts
- Crush, dominate, optimize everything
- Fear-based urgency

8.5 Sentence Structure & Style

Use short to medium-length sentences and brief paragraphs. Explain complexity in plain language and avoid unnecessary jargon.

8.6 First-Person Usage

Use “we” to reflect a firm-level perspective. Use “I” selectively in personal content where authenticity matters.

8.7 Final Rule

If it sounds like marketing, rewrite it. If it sounds like a thoughtful professional explaining a decision, it’s correct.

This section is intended to be inserted into the Capable Wealth Master Brand Standards document without modification.

9. Brand Governance & Maintenance

This section defines how the Capable Wealth brand is maintained, protected, and evolved over time. Consistent governance ensures the brand remains credible, cohesive, and professional as new materials are created.

9.1 Brand Authority

The Master Brand Standards document is the single source of truth for all Capable Wealth visual and verbal identity decisions. Any asset not aligned with these standards is considered non-compliant.

The website serves as the primary real-world reference for how the brand is implemented.

9.2 Approval Requirements

The following changes require explicit approval before use:

- Logo modifications or new logo variants
- New colors or changes to the color palette
- New fonts or typography changes
- Significant layout or UI pattern changes
- New messaging frameworks or positioning statements

9.3 Approved Without Review

The following may be created without additional approval, provided standards are followed:

- New website pages using existing layouts
- Blog posts and educational articles
- Lead magnets using approved templates
- Social media posts using approved tone and visuals

9.4 Version Control

Each update to the Master Brand Standards should increment the version number and include a brief change summary. Older versions should be archived but not used for new work.

9.5 Onboarding New Contributors

Any designer, writer, or contractor working with Capable Wealth must review the Master Brand Standards before producing materials. This applies to both internal and external contributors.

9.6 Enforcement

Assets that do not comply with the brand standards should be revised or retired. Exceptions should be rare and documented.

9.7 Final Rule

Consistency compounds trust. When in doubt, defer to the standards or remove the asset.
